- LinkedIn | ■ GitHub

EDUCATION

BCA
Sam Higginbottom University of A.T.S
2016

SKILLS

Languages: Python, JavaScript, SQL, Bash

AI/ML: YOLOv8/11, EasyOCR, Gemini API, OpenCV, Pandas

AIOps & Infra: Docker, MicroK8s, Systemd, Nginx, Grafana, TCP/IP WebSockets

Tools: Node-RED, Git, Cursor, Flask

RECOGNITION & CERTS

- Google Developer Premium Tier Badge
- Advanced Kubernetes (Linkedin)
- ML with Python (TCS iON / IBM)

PROFESSIONAL SUMMARY

Mid-level AI Deployment Engineer and MLOps Specialist with expertise in taking complex AI/ML and IoT systems from development to robust, scalable production environments. Specialized in containerization (Docker), Edge AI, and building self-healing, zero-downtime architectures for critical healthcare infrastructure. Recognized thought leader on Google for Developers and Dev.to.

PROFESSIONAL EXPERIENCE

AI Deployment Engineer & Python Developer

Criterion Tech, Lucknow | Apr 2024 – Present

- Architecting and managing the migration of 28+ critical hospital microservices (ECG APIs, IoT monitors) to a centralized, self-healing Dockerized infrastructure.
- Designing complete end-to-end AI pipelines for Computer Vision systems (YOLO) and integrating them with Generative AI (Gemini API).
- Developing robust REST APIs (Flask) and multi-threaded WebSocket servers to handle concurrent IoT data without data loss.
- Managing Edge AI deployments on Raspberry Pi, ensuring efficient inference in resource-constrained medical environments.
- Building automated data pipelines using Node-RED for real-time sensor processing and HIS API integration.

Senior Technical Trainer & System Administrator

Softech / Aptech Computer Education | Apr 2016 – Apr 2024

- Delivered advanced technical training on Python, Database Management, and System Architecture.
- Managed Linux-based lab infrastructure, ensuring 99% uptime for practical sessions.
- Mentored students in building final-year projects involving Web Development and Automation.

KEY PROJECTS & TECHNICAL EXPERTISE

Fail-Proof IoT Monitoring Dashboard for Smart Hospitals

- Architected a centralized BMS for ICUs to monitor critical environmental data in real-time.
- Built a robust multi-threaded TCP/Flask server to handle concurrent connections, ensuring absolute zero downtime.

Edge-AI-Powered Medicine Strip Analyzer

- Developed a Computer Vision pipeline using YOLOv8 for pill detection and EasyOCR for text extraction.
- Integrated the multimodal Gemini Pro API to generate human-readable medical usage insights automatically.

Autonomous Healthcare Infrastructure & Microservices

- Migrated multiple legacy PHP/Apache applications and hardware APIs to Docker containers.
- Implemented automated continuous data acquisition pipelines for Urine & IV-Fluid devices via Node-RED.
